

LENTEK Pest Control

DIRECTIONS FOR USE

The Electronic Ultrasonic Pest Repeller is a new revolutionary invention that has produced an innovative breakthrough in rodent and pest control.

HOW DOES ULTRASONIC TECHNOLOGY WORK?:

The 'Electronic Ultrasonic Pest Repeller' emits a fluctuating ultrasonic sound. This allows the device to target different pests. Generally, higher ultrasonics affect mammals such as mice and rats, while lower ultrasonics are more disturbing to smaller pests. Pests can not tolerate this constantly changing environment, which causes them to leave the area.

WILL IT AFFECT PETS and APPLIANCES?:

No. It will not affect computers or appliances. The PC14 generates ultrasonic waves which are above the hearing range of humans, dogs, cats, fish and birds. These ultrasonic frequencies CAN be heard by rodent pets such as, hamsters, gerbils and rabbits. However, by positioning the unit in an area away from the rodent pet, you may not cause it discomfort.

HOW MANY WILL I NEED?:

This device transmits sound up to 2500 sq.ft. Most houses will need multiple units throughout the home for adequate effectiveness. Since each home is different, place the device in the most problem area and monitor the results.

HOW QUICKLY WILL I SEE RESULTS?:

Allow up to 60 days for satisfactory results. Glue boards and/or traps may be used to help during the initial clean-up period. After results have been obtained, keep the device plugged in for continuous protection.

DIRECTIONS FOR USE:

Simply plug the device into an unobstructed wall outlet in the room to be covered by ultrasonic sound. Coverage in a room can be improved by bouncing the sound off reflecting objects such as walls, mirrors, cupboard doors, appliances, etc... Obtaining a ricochet pattern will increase effective coverage. The ultra-sonic sound benefits will be effective throughout the living area of the home, only if doors are left open. Ultrasound can not transmit through walls and doors. There will be a stronger effect of ultrasound within the room where it is placed. If you would like additional ultrasound protection, we recommend you purchase an additional device or call LenteK for information on LenteK's Electro-magnetic and Ultrasonic sound products at 888-3-LENTEK or get more information online at www.lentek.com.

SAFETY:

1. Use only extension cords having plugs and receptacles that accept the pest repeller's plug. Replace or repair damaged cords.
2. The electrical rating of the extension cord must be as great as the electrical rating of the pest repeller.

3. Disconnect the pest repeller from the power supply when not in use, before cleaning, etc.
4. Do not insert foreign objects into this product.
5. The pest repeller is for Indoor Use Only.
6. To avoid electric shock, DO NOT clean the pest repeller with water or by immersion in water.
7. Read and follow all operating instructions.

PLACEMENT OF THE UNIT:

We recommend placing the unit in the one room where you have the greatest pest problem or a centrally located position within the home. Plug multiple units in opposite sides of the room or in unprotected rooms. Multiple units will create a ricochet effect with the sound.

SOUND 'SHADOWS':

Ultrasonic waves travel in straight lines like audible sounds, echoing off non-absorbing materials. Sound absorbing materials such as carpets, drapes and soft furniture will reduce the Pest Repeller's range. 'Shadow' areas may occur around corners or in nooks and crannies where the sound waves can not hit.

CAUTION - TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, UNIT IS FOR HOUSEHOLD USE ONLY.
